New EyeTV 3 Features

Smart Guides
Schedule recordings according to criteria you choose, and EyeTV will always find your favorites.

Smart Playlists
Pick your criteria, and EyeTV will auto-fill a playlist of recordings.

EyeTV Sharing
Browse through EyeTV recordings on other Macs on your local network, and share your recordings.

Improved On Screen Menu
Using EyeTV full screen has never been easier.

Cover Flow
Using Leopard? Turn on Cover Flow in EyeTV, and quickly browse your recordings.

Channel Set Management
Travel a lot? Save a channel set for each city, or back up your customized channel list.

EyeTV iPod Assistant
Quickly capture recordings for a video iPod.

Improved Editor
Larger and cleaner interface for fast editing.

Improved Wi-Fi Access
Choose the streaming format best suited for your network connection.
Welcome To EyeTV!

This guide shows you how to begin watching and recording television programs on your Macintosh. It covers installing and configuring EyeTV software and includes instructions for using the most common features of EyeTV.

Step One: Installing EyeTV Software

• Insert the EyeTV software CD into your CD-ROM or DVD-ROM drive.
• Drag and drop the EyeTV application where you would like to install it. We recommend your Mac’s Applications folder.

Step Two: Launching EyeTV for the First Time

• Navigate to the folder where you installed the EyeTV Software and double-click the EyeTV icon.
• The first time you launch EyeTV, a Setup Assistant will guide you through the complete setup and configuration of your EyeTV software.
• You may be asked to enter an Activation Key. This either came with your EyeTV product, or has been provided to you electronically. Keep this key in a safe place, in case you need to reinstall the EyeTV software.
• When you complete the Setup Assistant, the EyeTV Programs window, an EyeTV viewer window and the EyeTV Controller will appear.

Registering EyeTV Online

Registering EyeTV entitles you to the following benefits:
• Notification of product updates
• Technical support
• Special offers

To register:
• Open your web browser and go to: www.elgato.com/registration.html
• Enter the requested information and click the “Submit” button.

Where to get help

Both the EyeTV Support web site at www.elgato.com/elgato/int/mainmenu/support.en.html and the EyeTV Help, accessible through the Help menu, are your first destinations for getting answers to your troubleshooting questions.
How do I open a Live TV window?
Select Open Live TV Window from the File menu.

How do I close a video window?
Select Close Window from the File menu.

How do I resize a video window?
Grab the lower right corner of the window and drag it diagonally.
Or, choose a pre-selected size from the View menu:

To watch in a small size window:
• Select Small Size from the View menu or press Command-1.

To watch in a half size window:
• Select Half Size from the View menu or press Command-2.

To watch in a normal size window:
• Select Normal Size from the View menu or press Command-3.

To watch in the largest sized window that will fit on your screen:
• Select Maximum Size from the View menu or press Command-4.

How do I watch video in Full Screen mode?
Select Enter Full Screen from the View menu or press Command-0.

How do I exit Full Screen mode?
Press the Esc key, press Command-0, or double click on the video window.

How do I keep player windows on top?
Select Keep Player Windows On Top from the View menu or press Option-Command-F.

How do I change the Aspect Ratio of a video window?
EyeTV will automatically try to choose the correct aspect ratio. Typical TV has a 4:3 ratio, while a few widescreen formats also exist.

If you would like EyeTV to automatically choose a certain ratio, you can pick that from the View menu. This could be useful if you are trying to remove letterboxing, or display content on a widescreen monitor. Your choices are 4:3, 14:9, 16:9 and Wide. Some ratios may visibly remove part of the image, to make it fit that shape without otherwise stretching or distorting the picture.
EyeTV Tips And Tricks

How do I open several multiplex channels?

Digital TV channels are often subdivided into multiple subchannels.

Looking for subchannels, or identical frequencies, would be the way to determine if channels are on the same multiplex. Look in the frequency column of the Channels section of the Programs window, to see the frequency. In the US, digital antenna (ATSC) subchannels are often designated by a hyphen (like 11-1 for regular programming, and 11-2 for weather).

To open an additional live TV window, hold down the Control key while selecting Open Live TV Window from the File menu. After you press the Control key, you’ll see a new option in the File menu, Open Live TV on Multiplex. A new video window will open from that multiplex.

You can open as many additional windows as you like, but 2 or 3 are a practical upper limit on most machines.

All live TV windows can be paused, timeshifted, manually recorded, etc. independent of each other. Scheduled recordings will not be able to open more than one multiplex channel at once - you have to do so manually, and then click on each window before selecting Record.

For products with only one tuner, changing any window to a channel on a different multiplex will change all other open windows to channels on the new multiplex.

How do I take a picture of what’s on screen?

Pause playback of your recording or live TV, and move the timeline until the EyeTV player window is displaying the frame you want. Then, choose Snapshot from EyeTV's Edit menu. EyeTV saves the picture to the Desktop.
On Screen Controller

How do I use the On Screen Controller?

EyeTV Information Display

1. This area displays the name of the program currently being watched or recorded, the elapsed time, and the channel on which the program is playing. Clicking the time display toggles between elapsed time, total time, and time remaining.

2. EyeTV Programs - Click this button to bring up the EyeTV Programs window, which displays all of the Recordings, Schedules, Playlists, Favorite Channels, and the Program Guide.

3. EyeTV Menu - Click this button to bring up the EyeTV On Screen Menu over the current player window.

4. Channel Number - Click to use a drop-down menu to switch to any available channel.

5. Current Channel List - Use this drop-down menu to switch between Favorite Channel lists, and all channels.

6. Channel Down - Click this left facing triangle to switch to the next lower channel.

7. Channel Up - Click this right facing triangle to switch to the next higher channel.

8. Time Slider - This bar gives a visual representation of your current position in the show. For example, you are at the beginning of the show when the bar is at the left edge of the timeline and you are at the end of the show when the bar fills the timeline. Click anywhere inside the slider to jump to any part of the recording; click and drag to scan through the program.

Timeshifting Control Buttons

9. Play/Pause - Click this button to play/pause the current program. In the case of live television, EyeTV keeps recording the live feed onto your disk. The pause time remaining for your now timeshifted show depends on the free space available on your disk.

10. Record - Clicking this button starts or stops recording the current program. The record button is highlighted pink during a recording. By default, the manually started recording’s duration is set to 180 minutes (3 hours). If you want to record a longer program, please highlight the recording in the Recording section of the EyeTV Programs window, press the Info button, and edit the schedule there.

Many EyeTV units have only one tuner, and can only handle one video source at a time. Thus, channels and inputs cannot be changed while recording. Once a recording has started, the Live TV Buffer is flushed so you cannot skip backwards beyond the start time of the recording.
11 Instant Replay - Clicking this button will rewind the current program 7 seconds and continue playing, creating an “instant replay” effect. Clicking this button while holding down the Option key starts playing the current program from the beginning.

12 Jump - Clicking this button will fast-forward the current program 30 seconds and continue playing. This is useful for jumping over less desirable content. Clicking this button while holding down the Option key resumes watching live television.

13 Fast Backward - Click this button to play the current program in reverse at high speed. Clicking this button while pressing the Option key plays the current program in reverse in slow motion. 2x, 4x, 8, 16x, 32x speeds are available.

14 Fast Forward - Click this button to play the current program at high speed. Clicking this button while pressing the Option key plays the current program in slow motion. 2x, 4x, 8, 16x, 32x speeds are available.

15 Volume Control - Use this curved slider to control the volume of the program being played.

16 Mute - Click this button to mute the sound, click it again to turn it back on.

EyeTV Tips And Tricks

More About On Screen Controller

Use EyeTV’s Window menu to hide or show the On Screen Controller.

While EyeTV is recording, the EyeTV icon in the Dock displays a red dot in place of the On Screen Controller.
On Screen Menu

What is the On Screen Menu?

The On Screen Menu enables you to sit back and relax while you watch and record television on your Mac.

It works with the Apple Remote, and remotes that have been bundled with EyeTV products. It also has keyboard and mouse navigation.

How do I open the On Screen Menu?

There are a number of ways to enter EyeTV’s On Screen Menu. While EyeTV is running, either

a) Press Command-Esc on the keyboard, or
b) Press and hold the Menu key on the Apple Remote, or
c) Press the Enter key on the silver EyeTV remote control, or
d) Press the OSD key on the black EyeTV (Terratec) remote control, or
e) Select Open Menu from EyeTV’s View menu.

How is the On Screen Menu organized?

The EyeTV Menu of the On Screen Menu includes these options:

Details - More information about the currently playing video
Recordings - A list of all recordings in your EyeTV Library, organized by playlists
Channels - A list of the channels you have available. The title of the current program on each channel will be listed, if available.
Guide - The Program Guide will be shown - it can be used to select shows to record.
More - Leads to the next page of the On Screen Menu.

If you select More, then you will see a second page of options:

Live TV - Allows you to pick from the following options: Resume Playing, Mute, Picture-in-Picture, Favorite Channels, Input, Last Channel, Go to Live, Record, Aspect Ratio, Closed Captions, Audio Channels.
Schedules - Lists all scheduled recordings. Select one to Delete, Disable, Export to iPod, Export to Apple TV, and Add to Playlist.
Settings - Allows you to pick from the following options: Display Options, Audio Output, Controls, and Sort Order.

How do I navigate the On Screen Menu?

To select an item and move a level down into its submenu, indicated by a small caret at the right edge of the screen, use either

a) The OK button on the EyeTV remote control, or
b) The Play/Pause button on the Apple Remote, or
c) The Enter/Return keys on your keyboard.

To go back up one level, press either
How do I close the On Screen Menu?
To exit the On Screen Menu, keep going back up one level by pressing either:

a) the Enter key on the EyeTV remote control, or
b) the OSD key on the black EyeTV (TerraTec) remote control, or
c) the Menu button on the Apple Remote, or
d) the Esc key on your keyboard, or
e) double click the title of the present level, or
f) click the left-facing triangle next to the title.

You will be reminded of this behavior the first time you use the Apple Remote with EyeTV.

Use the Up/Down buttons on the remote control to scroll up and down the list of menu items. To select an item and move a level down into its submenu, indicated by a small arrow at the right edge of the screen, press the Play/Pause button on the Apple Remote.

To go back up one level, press the Menu button on the Apple Remote.

How do I access recordings via the On Screen Menu?
Select the Library command in the Recordings section.
You can also browse and view individual Playlists that you have created, selecting individual recordings to view.

To change the sort order of recordings, between Sort By Date (latest first) and Sort By Title (alphabetically), select the Sort Order command in the Settings menu.

How do I schedule recordings via the On Screen Menu?
You can use the Program Guide built into the On Screen Menu to browse for upcoming shows, and schedule them for recording immediately, without leaving the On Screen Menu. Any potential recording conflicts will be announced, and there is a separate Schedules section to further manage your upcoming recordings.

How do I use the On Screen Menu with the Apple Remote?
To select an item and move a level down into its submenu, indicated by a small caret at the right edge of the screen, use the Play/Pause button on the Apple Remote.

To go back up one level, press the Menu button on the Apple Remote.

When EyeTV is running:
Press the Menu button on the Apple Remote to enter Front Row.
Press and Hold the Menu button on the Apple Remote to enter the On Screen Menu.
How do I watch Live TV via the On Screen Menu?

Select More at the bottom of the On Screen Menu. You will then see the option for Live TV.

You will have choices to Resume Playing, Mute, turn on Picture-in-Picture, select Favorite Channels, change the video Input, go to the Last Channel, and Go To Live. You can also Record, change the Aspect Ratio, show Closed Captions, and adjust Audio Channels.

EyeTV Tips And Tricks

Put your Mac to sleep via the Apple Remote

1) Press the Menu button on the Apple Remote until you exit the On Screen Menu
2) Press the Menu button to enter Front Row
3) Press and hold the Play/Pause button for a few seconds to sleep your Mac

Also see the section EyeTV Remote control for more information.
Programs Window

What is the EyeTV Programs window?

The **EyeTV Programs** window is the main interface to the application.

It is organized into a number of sections, accessible from the **Categories** column on the left. **Library**, **Shared**, **Smart Guides**, **Playlists** and **Channels** are the default sections.

The **Library** section is sub-divided into **Recordings**, **Schedules**, **Channels** and **Program Guide**.

How do I open the EyeTV Programs window?

Choose **Show EyeTV Programs** from the **Window** menu, and the **EyeTV Programs** window will appear.

You can also press the button at the top right corner of the **On Screen Controller**, to open the **EyeTV Programs** window.

How do I use Cover Flow in the EyeTV Programs window?

When using EyeTV under OS X 10.5 (Leopard), an extra button will appear at the top of the **Recordings** section. That **View** button can be used to turn **Cover Flow** mode on or off.

When using EyeTV under OS X 10.4 (Tiger), that button will not appear, and **Cover Flow** mode can not be started.
Program Guide

What is the Program Guide?

EyeTV has a built in Electronic Program Guide (EPG), that lists upcoming programs available for viewing or recording. Information for that list is gathered from online sources like TitanTV, tvtv and IceTV, depending on where you live.

How do I set up the Program Guide?

To set up the Program Guide for the first time, start the EyeTV Setup Assistant from the Help menu. After you Auto Tune, EyeTV will prompt you for certain information, like your zip code for those in the US.

Then, the Program Guide section will then list upcoming programs. These programs will be in a grid format, with the colors representing like genres, such as movies or news.

If you need to update your Channel Lineup, that option is in the Action menu of the Channels section. To update the Guide, that option is in the Action menu of the Program Guide section. You can also use the Guide section in the Preferences.

How do I use the Program Guide to find content?

At the top right corner of the EyeTV Programs window, there is a field to enter words for a search. For example, if you want to find all instances of The Simpsons, then enter “Simpsons”. Then, the Program Guide section will temporarily narrow down, to only show the results of that search.
You can save your search as a Smart Guide (see next chapter) that constantly records the results of your search.

Erase the search terms from the box, to bring things back to normal.

**How do I use the Program Guide to schedule?**

To add a schedule using the EyeTV Program Guide, select the Program Guide section in the EyeTV Programs window. You will see information about upcoming programs, using information from TitanTV, tvtv, or other sources, depending on your location. Clicking the red RECORD button next to a program tells EyeTV to schedule the program to be automatically recorded.

**How do I use the Program Guide to record?**

To immediately record using the EyeTV Program Guide, select the Program Guide section in the EyeTV Programs window. You will see information about upcoming programs, using information from TitanTV, tvtv, or other sources, depending on your location. If a scheduled item has already started, but it not yet over, then clicking the red RECORD button next to the program tells EyeTV to record the program already in progress.

**What do the colors mean in the Program Guide?**

- Grey - Default, no particular genre
- Orange - Series
- Dark Blue - Movie
- Yellow - Music
- Turquoise - Sports
- Light Blue - News
- Red - Childrens
- Green - Documentary

**Coverage Details**

See the Appendix for more details about the different programming guides that EyeTV supports:

- TVTV for several European countries
- TitanTV for the USA
- IceTV for Australia

EyeTV can also build an EPG from information contained in a digital broadcast (DVB, ATSC or ISDB-T). The “built-in” EPG offers significantly less information and covers fewer days than the EPG downloaded from tvtv/TitanTV/IceTV, but it is an alternative for users without an active subscription, or those in a country currently not served by an online EPG service.
Smart Guides

How do I create a Smart Guide?

Smart Guides are automatic searches, that will constantly examine the Program Guide for shows you want to see.

To make a Smart Guide, start your search in the electronic program guide window, modify or further refine the search using the criteria below, then simply click Save to save the results.

Or, you can choose New Smart Guide... from the File menu, or press the + button at the bottom left corner of the EyeTV Programs window.

How do I use Smart Guides?

Smart Guides are automatic searches, that will constantly examine the Program Guide for shows you want to see.

After you name your Smart Guide, enter one or more search terms you want to use.

You can add or subtract criteria by using the + and - buttons.
Here are the categories you can search within:

- Any Field
- Title
- Episode Title
- Description
- Actors
- Director
- Content
- Year
- Duration
- Start Date
- Stop Date
- Start Time
- Stop Time
- Channel Name
- Channel Number
- Favorite Channels
- HDTV
- Repeat
- Episode Number
- Episode Count

As you change the search criteria, the guide will automatically update.

What recording options are there with Smart Guides?

Click on an entry to find out more about that program, or to use the Add Schedule button. You can also choose to record it by pressing the pink circle underneath the name of each item in the Smart Guide.

Press the Options button if you would like your Smart Guide to automatically Record All Matches of the programs that it finds. You have the option to add these recordings to a certain playlist, or to export them to iTunes, in the iPod, iPhone or Apple TV formats. You can also let EyeTV create the corresponding Smart Playlist that will contain the subsequently recorded programs.

Finally, you can tell EyeTV to keep only a certain amount of recordings. You may be recording 10 items each week using a Smart Guide, but if you select Keep 5 shows, then only the last 5 recordings for that Smart Guide will be saved - the rest will be deleted. This will let you give a rough limit for how much hard drive space each Smart Guide will use for recordings.

How do I remove a Smart Guide?

Smart Guides are automatic searches, that will constantly examine the Program Guide for shows you want to see.

To permanently remove a Smart Guide, highlight it and press the Delete key on the keyboard. That will not delete any recordings or schedules already associated with the Smart Guide; it will only remove that specific automatic search.
EyeTV Tips and Tricks

Narrow down your Smart Guide search

Here is a specific example of how to narrow down a Smart Guide search. We are looking for new episodes of the “Simpsons” that are on one specific channel. Start from the main EPG window’s search field by typing “Simpsons”. Then change the Any Field contains Simpsons condition to Title contains Simpsons (to avoid catching Simpsons that appear on late night comedy channels). Then add the Repeat is false condition to get only the new episodes, and the Channel is 2 condition (because there are several cable channels carrying new Simpsons episodes).

In this way, you’ll only find the new episodes of the Simpsons and won’t have to weed out the duplicates afterwards.

How to keep a specific Smart Guide recording from being automatically deleted

If you’ve set a Smart Guide recording to keep the latest 5 episodes, EyeTV won’t keep more than 5 of them. To save a specific recording from being auto-deleted, highlight it in the EyeTV Programs window, then click the Action menu (that looks like a gear) and select Keep Recording.
How do I manually schedule a recording?

To add a manually scheduled program, select the Schedules section, click the New button at the top of the window and fill in the program’s parameters, including Title, Episode, Description, Date and Time (When), Duration, Repeats and what channel or input (Where).

You can also set a schedule to add its recording to a particular Playlist, and to export to the iPod or Apple TV format after recording completes. That will export to an H.264 format, and add the item to an “EyeTV” playlist in the iTunes Library.

How do I repeat a schedule?

Existing schedules will appear in the Schedules section of the EyeTV Programs window with an icon of a clock next to them. To repeat a schedule, highlight it and either press the Info button on the top of the Schedules section, or select Edit Schedule from the Action menu. Then, adjust the Repeats menu, which includes Daily, Weekly, Weekdays and Custom options.

How can I set a recording limit for a schedule?

You can tell a schedule to keep only a certain amount of recordings. If you select a value for Repeats, then you can also enter how many shows should be kept.

You may be recording 5 items each week using a schedule, but if you select Keep 2 shows, then only the last 2 recordings for that schedule will be saved - the rest will be deleted. This will let you give a rough limit for how much hard drive space each schedule will use for recordings.
How do I delete a schedule?

Existing schedules will appear in the Schedules section of the EyeTV Programs window with an icon of a clock next to them. To permanently remove a schedule, highlight it and either press the Delete key on the keyboard, or select Delete from the Action menu.

How do I deactivate a schedule?

Existing schedules will appear in the Schedules section of the EyeTV Programs window with an icon of a clock next to them. The checkbox to the left of the schedule’s name allows you to enable or disable it. Only enabled schedules will create recordings; disable a recording if you don’t want to use it now, but perhaps want to turn it on again later.
Recordings

How do I find a recording?

Each time you record something using EyeTV, a new entry will be added to the list in the Recordings section of the EyeTV Programs window.

During the recording process, there will be a progress bar, listing the time elapsed, and total duration.

You can use the search box at the top right corner of the Recordings section to find specific recordings by name.

How do I watch a recording?

After you find your recording in the in the Recordings section of the EyeTV Programs window, double click on it and it will immediately start playing.

If you’ve never watched it before, it will start at the beginning. If you’ve watched part of it before, it will start at the point you last closed it.

How do I delete a recording?

After you find your recording in the in the Recordings section of the EyeTV Programs window, highlight it and then press the Delete key. You will be asked to confirm the deletion. You can also use the Action menu to select Delete.

If the recording was associated with a repeating schedule, the repeating schedule will not be deleted.

How do I edit a recording?

After you find your recording in the in the Recordings section of the EyeTV Programs window, highlight it and then select Open Editor from the View menu. You can also use the Action menu to select Edit.

When a recording is playing, press the grey button at the top right corner of the window, on the title bar. That will also open the editor.

How do I export a recording?

All recorded programs can be exported to a QuickTime file for use in other programs. Perform the following steps to save a recorded program as a QuickTime movie:

• Open the EyeTV Programs window and select the video recording you wish to save by clicking on it once to highlight it
• Choose Export... from the File menu, or from the Action menu (which looks like a gear).

Under Format, you will have a number of preset options. EyeTV will create the correct files for use with those applications. You can also choose the specific format you prefer.
How do I sort recordings?

Recordings are sorted by Title, Duration, Date and Size. To sort the Recordings section, click on one of the columns, like the Date column, and the sort will happen. Click again to reverse the order. You can change the order of the columns, by clicking on the label, and then dragging it to the left or right.

EyeTV Tips and Tricks

Use Playlists and Smart Playlists to organize your Library

Once the total number of recordings in your EyeTV Library starts creeping towards triple digits, it’s time to organize your library. Instead of typing “Simpsons” into the search field each time you want to watch the latest episode, create a playlist or a Smart Playlist for your Simpsons episodes. Both types of playlists appear in the EyeTV Programs window’s Playlists section, and are described later in this manual.
Channels

What are channels?

EyeTV compatible hardware devices have built in tuners, to select channels. The type and amount of channels depends on what video source your particular device is using.

Typically, antenna and cable sources can be used to find channels, via the tuner input.

EyeTV can also receive channels from some networked devices, like the HDHomeRun or Freebox.

How do I detect channels?

To detect channels, you need to use the Auto Tune process. This is usually done via the EyeTV Setup Assistant, located in the Help menu. If you need to tune again, at the bottom of the Channels section there are controls to select your Country and Service, and then to Auto Tune. The tuning will take a few minutes, and will find all possible channels for that service.

If some channels are missing, you can select the Exhaustive Scan option before using Auto Tune.

How do I search for channels?

To search for particular channels, use the Search field at the top right corner of the Channels section in the EyeTV Programs window. The listing will become more restrictive with each additional character entered.
How do I change channels?

Once the Auto Tune is complete, your channels will appear in the Channels section, in numerical order. Double-click on the name of a channel to have EyeTV tune to that channel, and show it in the Live TV Window.

How do I rename channels?

For tvtv and IceTV users, note that changing the name of channels is not recommended, since it may affect the performance of the Program Guide. If you do need to change the name of a channel, highlight it in the Channels list, and choose Rename from the Action menu (which looks like a gear).

How do I sort channels?

Channels are sorted by Number, Name, Provider, Service, Frequency, EPG, and Type. To sort the Channels section, click on one of the columns, like the Name column, and the sort will happen. Click again to reverse the order. You can change the order of the columns, by clicking on the label, and then dragging it to the left or right.

How do I make a favorite channels list?

At the bottom left corner of the EyeTV Programs window there is a button with a + sign. Use that to name and add a Favorite Channels list. Or, select New Favorite Channels from the File menu.

If you drag channels from the Channels section to an empty space in the Categories column, you will automatically create a new Untitled Favorite Channels list. Rename it using the Action menu.

How do I use a favorite channels list?

Once you create a Favorite Channels list, you can drag items to it, from the Channels section.

Items in a Favorite Channels list can be sorted, added or deleted, without changing the full Channels section. Use a Favorite Channels list to create a subset of channels you like to visit.

A small remote control icon will appear next to the active Favorite Channels list. You can activate a favorites list via the on screen controller, or by double clicking on its name. When a Favorite Channels list is activated, only that lineup can be used for Live TV. If no Favorite Channels list is active, then all channels will be available to select from.

How do I save a channel set?

After you Auto Tune, a listing of all available channels is created. That channel set can be saved via the EyeTV Programs window, in the Channels section. Choose Save Channels... from the Service pop-up menu, and name your Saved Channel Set as you see fit.

Saved channel sets will be listed in the Service menu.

How do I edit a channel set?

In the Channels section of the EyeTV Programs window, choose Edit... from the Service pop-up menu. This brings up the Manage Channel Sets window.

The active channel set will have a blue circle next to it. After highlighting a channel set, you can use the Duplicate or Delete buttons.
You can also Export... channel sets, which helps if you are installing EyeTV on another computer, or if you visit many different locations regularly - you can have a channel set for each location. Exported channel sets will be saved to the Desktop, but you can move them to anywhere on your computer. Double-clicking them will load them into EyeTV.

If you want to load a set you may have exported in the past, use the Import... button. If an identical set already exists, the new set will have “Copy” as a suffix.

EyeTV Tips And Tricks

**Quickly see what’s on, and what’s on next for each channel**

Open the EyeTV On Screen Menu by typing in the first few characters of the channel’s name or number. The EyeTV On Screen Menu appears automatically, and the currently running show is displayed next to each channel:

```
705 CBS KPIX-DT Next: 5:00 PM This Old House
707 ABC KGO-HD Next: 5:00 PM ABC7 News
709 PBS KQED-HD Next: 5:30 PM Happiness Plays
```

Now, press the right arrow (on the keyboard, or on an infrared remote control), and EyeTV displays what’s on next:

```
705 CBS KPIX-DT 4:30 PM Horseplay
707 ABC KGO-HD 4:36 PM Dream Home With Us
709 PBS KQED-HD 4:00 PM The Brain Fitness Club
```

Scroll to the channel you want to watch or record, and press Enter. It’s a quick and easy miniature programming guide in your channel list.
**Playlists**

**What is a Playlist?**

A **Playlist** is like a folder, that you can fill with one or more recordings from your entire **EyeTV Library**.

The original recordings are not removed from the **EyeTV Library**, but a link to them can be stored in a **Playlist**. This allows you to categorize your recordings for easier file management.

**How do I add a Playlist?**

At the bottom left corner of the **EyeTV Programs** window there is a button with a + sign. Use that to name and add a **Playlist**, which is a grouping of recordings. Or, select **New Playlist** from the **File** menu.

If you drag items from the **Recordings** section to an empty space in the **Categories** column, you will automatically create a new Untitled **Playlist**. **Rename** it using the **Action** menu.

There is no limit to how many **Playlists** you can create.

**How do I use Playlists?**

Once a **Playlist** is added to the **Categories** column, you can drag items to it, from the **Recordings** section.

Each **Schedule** can send recordings to a specific playlist. To do so, highlight a schedule in the **Schedules** section, choose the **Info** button, and then press the **Edit Schedule** button. At the bottom of that **Schedule Info** window, you can choose a playlist.

**What is a Smart Playlist**

A **Smart Playlist** is like a folder, that is automatically filled with one or more recordings from your entire **EyeTV Library**. Items in **Smart Playlists** are chosen due to specific criteria of your choosing, like a certain string of text in the title, or recordings from a certain channel.

The original recordings are not removed from the **EyeTV Library**, but a link to them can be stored in a **Smart Playlist**. This allows you to automatically categorize your recordings for easier file management - when new recordings are made, they will automatically join those **Smart Playlists** whose criteria they match.

EyeTV comes with certain **Smart Playlists** pre-installed, like Exporting, Recording Now and Past Week. You can add your own favorite **Smart Playlists** to this list.

**How do I add Smart Playlists?**

At the bottom left corner of the **EyeTV Programs** window there is a button with a + sign. Click it to add a **Smart Playlist**. Or, select **New Smart Playlist** from the **File** menu.

There is no limit to how many **Smart Playlists** you can create.
Automatically create a Smart Playlist

While creating a Smart Guide, you can also create a Smart Playlist that corresponds to the Smart Guide and that automatically “fills up” with the recordings that happen according to the Smart Guide’s rules.

How do I use Smart Playlists?

Before a Smart Playlist can be used, it should be given a name, and then you will need to choose one or more rules to narrow down what items will appear in it. Those rules are:

Title
Episode Title
Channel Name
Description
Size
Channel Number
Duration
Date Recorded
Currently Recording
Playlist
Has Wi-Fi Variant
Currently Exporting
Currently Compacting
Smart Guide

All Smart Playlists must have at least one rule. To add a rule, press the + button next to the last existing rule. To remove a rule, press the - button next to the rule you want to remove.

If Show Live Update is selected, then your EyeTV Library will be shown, and as you change the Smart Playlist rules, the list will automatically update. This serves as a preview of what sort of files the Smart Playlist will capture.
Editor

What are the parts of the editor?

There are a number of items in the editor:

**Timeline**: The horizontal bar represents the overall length of the recording. Light blue sections mark the clips of video. The yellow section in the screenshot is the currently selected clip. The currently selected clip can also be saved as a QuickTime movie or EyeTV recording. In this example, the selected clips are commercials that will be discarded later.

**Playhead**: A large triangle above the timeline indicates which point in the recording is currently playing (or paused). Use the *Spacebar* to toggle between play and pause. All navigational features of the EyeTV Remote and menus are also available, e.g. Fast Forward, Reverse, and so on.

**Thumbnails**: The lower row of small pictures represents the beginnings of individual scenes in the recording. There are two levels of detail for the thumbnails. When **Fine** is selected, the thumbnail is at the beginning of groups of pictures, usually around 15 frames, which represent approximately half a second of video. When **Fine** is deselected, each thumbnail starts at the beginning of a scene transition, as determined by the EyeTV hardware.
Markers: Pairs of smaller triangles beneath the time line are designed to bookend the clip you want to cut (or that you want to export) from the recording. There are no markers visible for a new recording.

To add a marker, use the button in the center of the editor, beneath the timeline. Press this button to add a new pair of markers at the current Playhead position. Markers are preserved with the recording when the editor drawer is closed. This allows you to begin editing your recording and save your work during interruptions.

To delete a marker group, click either one of the pair, and press the Delete key. To clear all markers, use the Clear All Markers command in the Action menu (which looks like a gear).

Arrow keys: The Arrow keys on the keyboard have different functionality depending whether the editor drawer is visible or not. When the editor is visible the right and left arrow keys can be used to navigate between thumbnails. When the editor is closed, and EyeTV is playing over a clip marked for deletion, the right arrow skips playback to the end of the clip.

How do I open the editor?

After you find your recording in the in the Recordings section of the EyeTV Programs window, highlight it and then select Open Editor from the View menu. You can also use the Action menu to select Edit.

When a recording is playing, press the grey button at the top right corner of the window, on the title bar. That will also open the editor.

How do I use the editor to select and remove content?

1) After you find your recording in the in the Recordings section of the EyeTV Programs window, highlight it and then select Open Editor from the View menu. You can also use the Action menu to select Edit. Or, use the second mouse button, which opens a context menu where you can choose the Edit command.

2) The recording will open, and there will be editing controls at the bottom of the window. Note the upside down triangle above the blue bar, that's the Playhead.

3) Press the Space Bar to pause the recording, and then move the Playhead to the beginning of the recording.

4) Now, move the Playhead to the first section you want to cut out. You should also press the Fine button, to see more detail.

5) At the middle bottom of the screen there is a circular button with two triangles in it. That's the Add Markers button. Press it to add a pair of markers at the beginning of the clip.

6) Move the marker on the right slowly to the right, or click on the thumbnails on the right side of the screen. The footage will slowly jump ahead, and then you can highlight the last frame you want to cut. The blue bar should now be yellow, meaning that the clips are selected.

7) The Compact command is accessed by using the Action menu at the bottom right corner of the Editing window (it looks like a gear/cog).

Either choose Compact now, or select more clips and then press it at the end. The Compact button will remove all of the clips permanently from your footage.
How do I export from the editor?

Any part of a recording can be saved as a separate movie. Use the editing tools to mark your favorite scene or video clip. Click into the marked area so that it is highlighted yellow, then choose Export Clip from the Action menu.

Exporting will not permanently affect the original recording.

How do I save content from the editor?

Any part of a recording can be saved as a separate EyeTV recording that is listed in the EyeTV Programs window. Use the editing tools to mark a clip so it is highlighted in yellow, and then choose Save Clip as Recording from the Action menu.

Saving a clip will not alter the original recording. The new clip will appear in the Recordings section of the EyeTV Programs window.

How do I break a long recording into smaller chunks?

Mark off the first section of your recording, and then choose Export Clip from the Action menu and save the first chunk. Repeat until done - if you just want two sections, then using the Invert Markers command from the Action menu would be useful. Invert Markers would highlight the section you haven’t exported yet.

What are the keyboard shortcuts for the editor?

- Delete deletes a marker
- Right arrow skips to next thumbnail to the right
- Left arrow skips to next thumbnail to the left
- Tab selects the next marker
- Shift-tab selects the previous marker
- Return sets a new marker
- Shift-C presses the Compact button
- Shift-F switches to Fine
- Shift-N switches to Normal
- Shift-M toggles between Normal and Fine

EyeTV Tips and Tricks

Match the aspect ratio to what’s being edited

If you’re editing a recording that is in 16:9 format and would like to eliminate the 4:3 content, it can be disturbing to see the entire player window’s aspect ratio change automatically when the playhead hits the areas of the recording that are at 4:3 aspect ratio. To avoid this, match the editor’s aspect ratio to the content that you are editing. Select Aspect Ratio > 16:9 from the View menu.
How do I start Picture in Picture?

You must have two video windows open to use PiP:

1) A Live TV window and a recording window
2) Two Live TV windows
3) Two recordings windows.

To have two Live TV windows, you need to have multiple tuners - perhaps by using a device like EyeTV Diversity (which has two tuners for DTT), or two EyeTV devices connected to your Mac.

There are 3 different ways to enter Picture in Picture (PiP) mode:

1) Select Picture in Picture from the View menu.
2) Press Control-Shift-P on the keyboard.
3) Use the contextual menu while EyeTV is playing back with two player windows.

You can also enable and control PiP from within EyeTV's On Screen Menu. In the On Screen Menu select Recordings, and start playback of a recording. Enter the On Screen Menu and select Picture in Picture, and then Show.

How do I use Picture in Picture?

EyeTV will display both player windows. The sound will come from the larger, primary player window. Move the mouse over the secondary window to display the four commands available:

Off — toggles off PiP display
Rotate — cycles placement of the secondary window between the following positions:

- top left corner
- top right corner
- bottom right corner
- bottom left corner
- vertical split screen
- horizontal split screen
- second monitor (if available)

Swap — swaps the content of primary and secondary windows
Focus — playback controls affect secondary window
EyeTV Sharing

How do I share my EyeTV Archive with others?

If you have more than one EyeTV Archive in your local network, each EyeTV installation can have read-only access to the other libraries.

To use this feature, visit the Sharing section of the Preferences. Check Share my EyeTV Archive - that will make your EyeTV Archive available to other users. Then select the Look for shared EyeTV Archives option. That will let you access the archives of other EyeTV users on your local network (who must have enabled EyeTV Sharing as well.)

How do I access Archives from other Macs?

The EyeTV Programs window has a Shared section. Open it via the triangle, and any shared EyeTV Archives on your local network will be listed. Click one to connect to and browse that library, then double-click on any entry to start watching.

Any shared recordings you watch are not copied to your Mac, just streamed at the original resolution. You cannot edit or erase those recordings - you have read only access.
Can I watch Live TV via sharing?

At this time, you cannot watch Live TV from another Mac via the Sharing feature. However, you can view a shared recording already in progress - just select it to start viewing.

EyeTV Tips and Tricks:

**EyeTV Sharing requires all participants to be connected in the same network and subnet**

Make sure that all Macs are on the same network and share the same subnet. To make EyeTV Sharing work from a Mac with a wired network connection to a wireless network connection (or vice versa), your wireless base station should be set up to create a bridge between the wired and wireless networks.

**EyeTV Sharing and the Mac OS X 10.5 Firewall**

To make EyeTV Sharing work with the Mac OS X 10.5 Firewall, you'll need to add both the EyeTV application and the EyeConnect service to the Firewall's list of applications and services that are allowed network access.

EyeTV installs the EyeConnect service here:

/Library/Application Support/EyeConnect/EyeConnect.app.
Wi-Fi Access

What is Wi-Fi Access?

Wi-Fi Access allows you to stream your EyeTV recordings to your iPhone, or iPod Touch over your wireless network. Since the streaming service is essentially a web page being served by EyeTV, this means you can also access the same recordings via a web browser, such as Safari, or Firefox over any local network.

Wi-Fi Access can share completed recordings, but not Live TV.

How do I start Wi-Fi Access?

In the EyeTV menu, select Preferences. Visit the Sharing section, and check Enable access from Safari on iPhone, iPod touch or Mac/PC.

EyeTV will set up a web page suitable for use on the iPhone, iPod Touch, and some other devices.

A clickable URL to your EyeTV Archive is listed; that uses your local hostname for OS X, and requires that port 2170 be open on your firewalls.

How do I use Wi-Fi Access with my network?

To use Wi-Fi Access, your Mac and device or browser must be on the same local network.

Make sure that all Macs and wireless devices are on the same network and share the same subnet. To make Wi-Fi Access work from a Mac with a wired network connection to a wireless network connection, your wireless base station should be set up to create a bridge between the wired and wireless networks.
How do I use Wi-Fi Access with my firewall?

If you have an active firewall, port 2170 will need to be opened.

To make Wi-Fi Access work with the Mac OS X 10.5 Firewall, you’ll need to add both the EyeTV application and the EyeConnect service to the Firewall's list of applications and services that are allowed network access.

EyeTV installs the EyeConnect service here:

/Library/Application Support/EyeConnect/EyeConnect.app.

How do I use Wi-Fi Access with my iPhone/iPod touch?

In the EyeTV menu, select Preferences. Visit the Sharing section, and check Enable access from Safari on iPhone, iPod touch or Mac/PC.

A clickable URL to your EyeTV Archive is listed; that uses your local hostname for OS X, and requires that port 2170 be open on your firewalls.

To provide an easy way to get this link onto your iPhone or iPod touch, the Sharing section of the Preferences has a function for emailing this link to yourself. You can then check the email from your iPhone or iPod touch and click on the link to access your streaming content.

How do I use Wi-Fi Access with a browser on a Mac?

In the EyeTV menu, select Preferences. Visit the Sharing section, and check Enable access from Safari on iPhone, iPod touch or Mac/PC.

A clickable URL to your EyeTV Archive is listed; that uses your local hostname for OS X, and requires that port 2170 be open on your firewalls.

This web page should work with Safari 3.0, or the latest versions of Camino or Firefox. It will be accessible from your local network, and not all over the world.

How do I choose a password for Wi-Fi Access?

In the EyeTV menu, select Preferences. Visit the Sharing section, and press the Change... button. Your user name will be "eyetv", and you can choose whatever password you like.

A clickable URL to your EyeTV Archive is listed; that uses your local hostname for OS X, and requires that port 2170 be open on your firewalls.

You will be asked for this password, whenever you visit that URL.

Once Wi-Fi Access is password protected, then you can adjust the password by pressing the Change... button.

How do I enable my EyeTV recordings for Wi-Fi Access?

The first time you turn on Wi-Fi Access, EyeTV will ask you whether you’d like to convert all existing recordings into a format suitable for Wi-Fi Access.

There are 5 options to choose from in the popup menu in the Wi-Fi Access preferences:
Choose the option that suits your needs. The Cellular option should be used if you plan to play back recordings via a slow-speed network.

You can also decide whether to convert all future recordings for use with Wi-Fi Access. Individual recordings may be enabled individually for use with Wi-Fi Access in the EyeTV Programs window. Select your recording, and check the box in the Wi-Fi Access column to begin the conversion.

**How do I use Wi-Fi Access outside of my network?**

To make Wi-Fi Access work outside of your local network, you will have to configure your router to forward port 2170 to your Mac’s private IP address. To the right is an example of the relevant setting in Apple’s Airport Extreme base station.

Other manufacturers’ hardware will have a similar feature. Note that there are several other considerations that are outside the scope of this manual, such as the requirement that your router’s public Internet address remain constant and easily reachable via a DNS entry.
Preferences

How do I change the export format to iTunes?

In the EyeTV menu, select Preferences. The General section allows you to select the iPod/ iPhone button export format.

There are three choices for the iPod:

- Best - 640x480 H.264
- Smallest - 320x240 H.264
- Fastest - 320x240 MPEG-4

There is one choice for the iPhone, 480x360 H.264.

Once you select a format, then that will be used whenever you press the iPod or iPhone button, at the top of the EyeTV Programs window.

How do I change the Live TV Buffer?

In the EyeTV menu, select Preferences. The Recording section allows you to select the type and style of Live TV Buffer.

The Live TV Buffer is a temporary storage place for live video, that enables you to pause and rewind live TV. By default, it is 2000MB, but you can press the Change... button to select a new size, 50MB and above.

You can also select to Keep in RAM, which will store the buffer in memory, rather than on disk. That can speed up access to the Live TV Buffer, or reduce disk activity.

How do I extend recordings?

In the EyeTV menu, select Preferences. The Recording section allows you to extend the recording time before or after a scheduled recording, to ensure the beginning or end is not missed.

The start or finish can be extended by 0, 1, 2, 3, 4, 5, 10, 15, 20, or 30 minutes. EyeTV will extend the recording by the amount selected if it can do so without conflicting with another scheduled recording.

How do I move my EyeTV Archive?

In the EyeTV menu, select Preferences. The Recording section allows you to select the location where your EyeTV Archive is stored.

If you want to make a new, blank EyeTV Archive, choose a new location, and then restart EyeTV. From that point on, recordings and schedules will be saved at that new location.

If you want to move an existing EyeTV Archive to a new location, then first use the Finder to copy the EyeTV Archive to that new location. Next, visit the Recording section of the Preferences, and choose that new location. Finally, restart EyeTV for the changes to take effect.
How do I change jump times?

In the EyeTV menu, select Preferences. The Controls section allows you to customize jump times, which are used to quickly skip forward or backward in the Live TV Buffer, or recordings.

You can enter the amount of seconds you’d like to jump forward, or back. For each direction, you can select two separate time periods - perhaps you want to jump 30 seconds forward to avoid a commercial, or jump 120 seconds forward to avoid a whole break.

These separate jump intervals can be controlled by the keyboard or EyeTV remote - each jump is controlled by a separate key or key combination.

How do I setup my EPG service?

In the EyeTV menu, select Preferences. The Guide section allows you decide how the Electronic Program Guide (EPG) will be setup.

Choose TitanTV if you are in the US, and that service will launch whenever you select Go To Online Guide from the File menu. It will also be used to populate the Program Guide section of the EyeTV Programs window.

For Europe, select your country’s tvtv service. In Japan, choose one of the iEPG choices. Australians can use IceTV. Some of these services require an additional monthly fee.

Make sure to press press Change..., and enter the Account name and Password you selected for that service.

EyeTV needs to periodically check with the Online Program Guide, to download 7 days worth of information. Use the Update option to select Every Day or Manually for your check.

You can choose to automatically check for schedules you may have added using your guide’s website. This will happen when you have a network connection, and you can elect to wake up your Mac to check for schedule changes.

How do I change the Overscan setting?

In the EyeTV menu, select Preferences. The Display section allows you customize the Overscan - how much of the TV image that appears on the edges.

Overscan hides the extreme edges of the TV signal that do not appear on a TV set. Overscan should be turned off when using a TV as a monitor, connected via S-Video.

How do I change deinterlacing?

In the EyeTV menu, select Preferences. The Display section allows you customize deinterlacing.

Deinterlacing reduces video artifacts caused by showing a TV signal on a computer monitor. You have four options for use with EyeTV:

- No Deinterlacing - Recommended when you are using a TV as a monitor, connected via S-Video.
- Motion-Adaptive - Fast-moving parts of the picture are deinterlaced, providing the best balance between picture quality and usage.
- Always - Deinterlacing always applied to the entire picture, producing a slightly softer effect.
- Progressive Scan - Advanced motion detection and doubled frame rate result in excellent picture quality. Requires a very fast Mac.
How do I stretch the full screen image?

In the EyeTV menu, select Preferences. The Display section allows you change how the video appears when displayed at full screen.

The Tab key can be used to toggle between normal and stretched presentation during full screen playback. Stretching will occur only if the original video occupies at least 75% of the screen area.

How do I use EyeTV with multiple displays?

In the EyeTV menu, select Preferences. The Full Screen section allows you determine if EyeTV will use other displays that may be connected to your Mac.

Start EyeTV in full screen will always switch EyeTV into full screen mode when you start EyeTV.

Black out other screens will darken all displays not showing full screen EyeTV video.

Always put full screen display on this monitor allows you to click on a small picture of the display that you want EyeTV to use for full screen playback.

How do I change the sound output?

In the EyeTV menu, select Preferences. The Sound section allows you determine how EyeTV will output sound.

Play sound when EyeTV is in background lets you hear EyeTV even if other applications are being used.

Play sound in the Dock will allow sound to continue even when the window is minimized.

EyeTV will also give you Audio Output choices that depend on the choices available to OS X. System Sound Output, Headphones, and Digital Out are some of options that may appear, depending on what’s connected to your Mac.

How do I turn on Game Mode?

Some EyeTV products can turn off their MPEG encoding chips, to improve console gameplay. If your product can use Game Mode, you can turn it on or off at the bottom of the Controls menu.

The Devices section of the Preferences will also let you toggle Game Mode on or off.

Game Mode will still have a very small delay - the smallest allowed by current available hardware - but most games should be quite playable.

How do I change the image quality?

In the EyeTV menu, select Preferences. The Encoding part of the Devices section allows you determine the quality for Live TV and recording.

The options will vary depending on what devices are connected; digital signals are pre-encoded and cannot be further adjusted.

How do I change the look of the picture?

In the EyeTV menu, select Preferences. The Picture part of the Devices section allows you change how analog signals appear. You can use sliders to adjust the Brightness, Contrast, Color, Hue and Sharpness of analog signals.
How do I find the signal strength readings?

In the EyeTV menu, select Preferences. The Signal part of the Devices section allows you see the Signal Quality and Signal Strength for products that can receive digital signals.
Remote Control

What remote controls can I use?

Most television tuner hardware compatible with EyeTV comes with an infrared remote control that can be used with EyeTV software. Elgato hardware is shipped with the EyeTV Remote control, which is described below.

If your Mac came with an Apple Remote, you can use it to control the EyeTV software.

You need to start the EyeTV software before using either remote control.

How do I use the EyeTV Remote to control EyeTV?

**Power**

If EyeTV isn’t displaying a window, a Live TV Window is opened. If there are windows playing EyeTV content, the front playing window is closed, and the next window is brought to the front. If the frontmost window is an alert dialog, pressing the Power key is like pressing Cancel or hitting Esc. Holding the Power key down for more than 3 seconds sends your Mac to sleep (this feature is not supported for all TV tuner devices.)

**Mute**

Click this button to mute the sound, click it again to turn it back on.

**Number keys**

Used to enter channel number.

**Last**

Switches the Live TV Window to go to the last channel used. If you’re watching a recording, pressing this button jumps playback to the start of the recording. If the front-most window is an alert dialog, pressing the LAST key is like pressing Cancel or hitting Esc.

**Enter**

Enters the On Screen Menu and switches to Full Screen mode. While in the On Screen Menu, Enter is used to navigate up one level.

If the front-most window is an alert dialog, pressing the Enter key is like pressing OK or hitting Enter on the keyboard.
Remote Control

**OK**
While in the On Screen Menu, the OK button is used to confirm your selection and will go down one level. Also used to terminate a sequence of numbers.

**Red**
Cycles through open windows backwards.

**Green**
Cycles through open windows forwards.

**Yellow**
Opens/closes the EyeTV Programs window, which displays all of the shows that have been or will be recorded.

**Blue**
Shows/hides the on-screen remote controller.

**Channel Up/Down**
Switches to the next higher or lower channel.

**Volume Up/Down**
Increases or decreases the sound volume.

**Instant Replay**
Playback jumps backwards for the duration specified in the Controls section of the Preferences. The default is 7 seconds.

**Play/Pause**
Toggles between playing back or pausing video.

**Jump**
Fast-forwards the current program 30 seconds and then continues playing. This is useful for jumping over less desirable content.

**Fast Backward**
Plays the current program in reverse at high speed.

**Red 'L'**
Jumps playback to live.

**Fast Forward**
Plays the current program at high speed.

**Stop/REVEAL**
Stops playback of the current program. REVEAL is a Teletext function.

**Menu/TXT**
Show/Hide Closed Captions. TXT is a Teletext function.

**Record/SIZE**
Starts or stops recording the current program. The default recording duration is three hours. To extend or shorten the recording time, open the currently recording program by selecting it in the EyeTV Programs window, clicking the Info button in the toolbar, and changing the recording’s ending time.

SIZE is a Teletext function.

**HOLD**
HOLD is a Teletext function. Also toggles full-screen mode.

**SELECT**
SELECT is a Teletext function. Also cycles through EyeTV’s analog video inputs.
How do I use the Apple Remote to control EyeTV?

For more details on using the Apple Remote with the On Screen Menu, see this manual’s section about the On Screen Menu. You can also use the Apple Remote to control EyeTV while in windowed Mode:

① MENU
② Play/Pause/OK
③ Channel up/Fast Forward
④ Channel down/Fast Backward
⑤ Volume Up
⑥ Volume Down

If your computer included an Apple Remote, you may use it to navigate EyeTV’s On Screen Menu.

Press the MENU ① button to enter Front Row.
Press and hold the MENU button to enter the EyeTV On Screen Menu. Use the MENU button to go up one level and the Play/Pause/OK ② button to go down one level. Use the ⑤ and ⑥ buttons to scroll up and down lists.
Support for Set Top Boxes

Set Top Box support is currently limited to the USA, and all satellite or cable providers for which information is available from TitanTV.

All television tuner hardware that is compatible with EyeTV can be connected to a set top box using either the composite, S-Video, or RF port. In this way, EyeTV can record programming that is available via the set top box. What follows in Configuring EyeTV and Set Top Box Support is a step-by-step tutorial on how to configure EyeTV to get the same programming guide as your set top box, and display it within EyeTV.

Although EyeTV can schedule recordings based on your set top box’s programming guide, EyeTV alone cannot change channels on your set top box. For this, additional infrared (also referred to as “blaster”) hardware and compatible software is required. EyeTV indicates its intention to change channels by posting a notification on your computer, which the application that controls the infrared hardware listens to.

Configuring EyeTV and Set Top Box Support (USA only)

If you own a supported hardware/software infrared blaster package, you should set it up before completing this section — please skip to Configuring EyeTV and IR Blaster Hardware below, complete the infrared setup, then return to this section.

You can configure EyeTV to get a programming guide for your Set Top Box in two ways:

a) Run the Setup Assistant. On the Connect Antenna or Cable panel, check the second check box. Later in the Setup Assistant, you will see a panel labeled AV Inputs with a Configure button on it. Press Configure.

b) In the main EyeTV Programs window, select the Channels section. In the Service popup, select Configure Set Top Box.

Both ways will bring up the Set Top Box configuration sheet.

1. First, name the set top box. This name appears in the Service column of the Channels panel. You may want to enter “Dish”, “Comcast”, “Time Warner” or something similar here. If you are using either iRed or ZephIR to change channels, use the name of the iRed tuner or ZephIR component you have already
set up for your box (see “Configuring EyeTV and IR Blaster Hardware” below.)

2. Select which device input you use (S-Video or Composite).

3. Select or change your Zip Code.

4. Choose a Service. The list of available services at your location is looked up at TitanTV.com every time you open this dialog, because it may change at any time. You cannot configure a Set Top Box without an Internet connection.

   If you choose a cable connection, you have the option of using the built-in tuner for low-numbered analog channels. This is because some cable providers, even when supplying digital cable service, supply unencrypted analog cable channels also. In some cases, the EyeTV tuner provides a better picture than the cable box provided by your cable company.

   When you click OK, EyeTV will download all the channels available from the chosen service. It will then begin to download the program guide for those channels. This may take a long time (8 days of program guide for hundreds of satellite channels are about 30MB), so don’t expect the Program Guide to be updated immediately.

5. Confirm that the downloaded channel list matches the channel list on your set top box. You may want to deselect all channel numbers that you do not subscribe to.
6. If you have infrared hardware, now test EyeTV’s capability to change channels. Use the on screen remote control or double click a channel in the channels list. This causes EyeTV to send a channel change notification. The ZephIR or iRed software (which should be running at all times) is already listening for these notification messages. Then, ZephIR or iRed will send the channel number requested by EyeTV to your set top box.

7. Use the Program Guide to schedule recordings on different channels. Once EyeTV has downloaded the complete electronic program guide information, use the on screen Program Guide information to schedule your recording. Remember to leave your set top box powered on. If you do not have infrared hardware, to ensure that EyeTV will record the channel you intended, you must leave your set top box tuned to the channel you want to record. EyeTV has no way of knowing what channel your set top box is currently tuned to.

8. If you have infrared hardware, leave the ZephIR or iRed software running, and remember to leave your set top box powered on.

A Note About Multiple Devices

If you have multiple devices with analog inputs, you will need to use the Configure Set Top Box item in the Channels panel. This will bring up a list of set top boxes, you can choose one at a time to configure.

EyeTV matches the configuration to the device using the device serial number, if it is available and unique. Only Elgato Hybrid, EyeTV 250 plus (2008 model) and the EyeTV 200 have unique serial numbers. For other devices, the matching is based on something called the USB location ID, which changes if you unplug a USB device and replug it into a different socket. So, if you have multiple devices, we recommend that you don’t move them around once they are configured.

Configuring EyeTV and IR Blaster Hardware

EyeTV supports Set Top Box channel changing using 3rd party infrared hardware and software packages.

Currently, two different packages provide solutions that are compatible with EyeTV: ZephIR and IRTrans/iRed. What follows are step-by-step guides to configuring EyeTV together with each solution. Technical support for these products is provided by their respective publishers/manufacturers.

ZephIR

ZephIR from studioZee makes hardware and software that is able to listen to the EyeTV channel change notification:

http://www.thezephir.com
The ZephIR package comes with software and an infra-red remote control device that you connect to your Mac via USB. ZephIR is not directly available from Elgato. Please use the link above to purchase directly from studioZee.

**iRed and IR Trans**

IRTrans by IRTrans GmbH is infra-red remote control hardware connected via USB to your computer.

The iRed software by tin:b Software controls the IRTrans hardware and is able to listen to the EyeTV channel change notification.

More information about IRTrans is here: [http://www.irtrans.com](http://www.irtrans.com)

More information about iRed is here: [http://www.filewell.com/iRed](http://www.filewell.com/iRed)

Mention iRed when purchasing IRTrans, to receive a bundle discount. Neither iRed nor IRTrans are directly available from tin:b Software or Elgato. Please use the links above to acquire them.

**Configuring ZephIR with EyeTV**

Once you have installed the ZephIR (version 3.0 or later), you will need to create a new IR Component that is able to change channels on your Set Top Box. Choose your type of Set Top Box from the zeecode database, or create your own component by learning your Set Top Box's remote, and give your component a unique name. You may want to enter “Dish”, “Comcast”, “Time Warner” or something similar here.

Later on, you will use this same name to identify your Set Top Box in EyeTV.

Leave the ZephIR application running after you've configured your component and have verified that ZephIR can change channels. Also, to ensure that unattended recordings in EyeTV work even when EyeTV starts up your Mac, add ZephIR to your Login Items (System Preferences > Accounts > Login Items.)

**Configuring iRed and IRTrans with EyeTV**

Once you have installed iRed 1.8.2 or later and IRTrans, you will need to create a virtual iRed tuner that is able to change channels on your set top box. Use iRed’s Tuner Assistant feature and give your virtual iRed tuner a unique name. You may want to enter “Dish”, “Comcast”, “Time Warner” or something similar here.

Later on, you will use the same name to identify your set top box in EyeTV. Leave the iRed application running after you’ve configured your virtual tuner and have verified that iRed can change channels.

You’ll also need to enable iRed to listen for EyeTV Channel Changes by checking the box in iRed’s Notification preferences:

Also, to ensure that unattended recordings in EyeTV work even when EyeTV starts up your Mac, add iRed to your Login items (System Preferences > Accounts > Login Items.)
For Developers of Infrared Hardware and Software

When the channel is changed in EyeTV, and at certain other times (e.g. opening the live window, starting or ending a recording), EyeTV posts a notification to the CF DistributedNotificationCenter. For more information about how to post and listen to notifications, consult Apple’s documentation.

The notification name is CFSTR ("com.elgato.ExternalChannelChange") The notification is accompanied by a dictionary with three members:

1. key="channelNumber", value = CFNumberRef, the number, generally 1 through 99999.
2. key="subChannelNumber", value = CFNumberRef, currently always 0.
3. key= "setBoxName", value = CFStringRef. This is the name from "Name" field of the Configure Set Top Box dialog. This name should match the name of the virtual tuner you make in iRed. So, if you set up a DirecTV box, you should call the Set Top Box in EyeTV "DirecTV", and the iRed virtual tuner "DirecTV". Currently, however, iRed ignores the name field.

If you are a developer and see a need for any other information in the notification, please contact us at stb-feedback@elgato.com.
DVD Creation

EyeTV and Toast

EyeTV has been integrated with Roxio’s Toast 8 Titanium disc recording software to make it easy for you to archive your favorite shows onto Video CD (VCD), Super Video CD (SVCD), or DVD.

Toast has a built in Media Browser. Select Media - EyeTV, and drag items from the listing of EyeTV recordings to Toast.

To burn a disc from within EyeTV, using Toast:

- Open the EyeTV Programs window, choose the Recordings section, and select the video recording you wish to archive by clicking on it once to highlight it.
- Drag it from the Recordings section of the EyeTV Programs window, to Toast’s Video section. Then, select what format you want to use (VCD, SVCD, DVD) in Toast.

You can also highlight the recording, and then press the Toast button at the top of the Programs window, or choose for Toast via the Export command.

Some EyeTV hardware devices may come with Toast Basic, which is a feature-limited version of Toast. That should also work with EyeTV as described above.

EyeTV and Other DVD Software

You can also highlight the recording, and then select the Export command in EyeTV. EyeTV supports exporting to Apple’s iDVD and DVD Studio Pro software. You can also export the video and audio elementary streams to post-process in other DVD authoring programs.
EyeTV Assistants

EyeTV contains several guided modules, called Assistants, designed to walk you through common tasks. These Assistants are accessible via the Help menu.

How do I use the EyeTV Setup Assistant?

The EyeTV Setup Assistant launches automatically the very first time you install EyeTV software and your new hardware. If your configuration changes, it’s a good idea to re-run the EyeTV Setup Assistant and let it Auto Tune again. The EyeTV Setup Assistant can also help when troubleshooting issues with the electronic programming guide.

How do I use the iPod assistant?

The iPod Assistant helps you capture movies for iPod Video, Apple TV, and iPhone. To run the iPod Assistant you’ll need EyeTV compatible hardware that contains analog inputs and a hardware MPEG encoding processor.

The iPod Assistant will walk you through the process of connecting your video source and capturing analog video into your Macintosh. Afterwards, the video will be converted into the appropriate iPod/iPhone/Apple TV format, and finally transferred to iTunes, where it will be synced to your device the next time it is connected to your Mac.

How do I use the VHS Assistant?

The VHS Assistant helps you turn your VHS tapes into DVDs. To run the VHS Assistant you’ll need EyeTV compatible hardware that contains analog inputs and a hardware MPEG encoding processor.

The VHS Assistant will walk you through the process of connecting your VHS recorder, capturing analog video into your Macintosh, and finally converting the video onto a DVD or into iPod format.
AppleScript

Many functions in Eye TV 3 can be accessed using AppleScript.

Script Menu

EyeTV 3 displays a **Script** menu in the menu bar when it finds scripts in the
/Library/Application Support/EyeTV/Scripts
folder. These scripts can be started directly from the **Script** menu. Please note that when scripts have changed EyeTV needs to be restarted for the changes to become effective.

Dictionary

The AppleScript Dictionary of EyeTV lists all available commands and parameters. The Apple application “Script Editor” (in /Applications/AppScript) can be used to inspect EyeTV’s script dictionary and to write scripts. You can also find example scripts on the EyeTV installation CD.

If you find that there is functionality in EyeTV that is not present in the AppleScript dictionary, please write us at support@elgato.com. We will try to accommodate your needs in future software updates.

Triggered Scripts

In addition to the conventional AppleScript support EyeTV 3 also offers the possibility to use triggered scripts. These are scripts which EyeTV automatically runs following certain events. EyeTV offers the following trigger events:

**ScheduleCreated**
Scripts using this trigger will start after a schedule is created.

**RecordingDone**
Scripts using this trigger will start after a recording has finished.

**ExportDone**
Scripts using this trigger will start after a recording has been completely exported.

**RecordingDeleted**
Scripts using this trigger will start after a recording was deleted. Commented example trigger scripts can be found on the EyeTV installation CD.

In order to execute these scripts EyeTV looks for triggered scripts in
/Library/Application Support/EyeTV/Scripts/TriggeredScripts.

In case this directory does not exist, create it manually.

Note: The TriggeredScripts directory and its contents are not displayed in EyeTV’s **Script** menu since triggered scripts should not be manually launched.
EyeTV Archive

What is kept in the EyeTV Archive?

EyeTV recordings and schedules, along with other information about your setup, are kept in the EyeTV Archive. The Archive is an ordinary folder, which has to be called “EyeTV Archive” for EyeTV to use it.

You can move the Archive folder wherever you like, but you must tell EyeTV where to look for it, in the Recording part of the Preferences.

Inside the EyeTV Archive are a number of files, which have specific purposes:

**EyeTV Archive.xml** – Contains the overall structure of the EyeTV Archive, for use with other programs that need to understand the EyeTV Archive’s contents. If erased, it will be recreated upon restart. This file is invisible.

**EyeTVAutoTune.log** – After an Auto Tune, information about the scanned frequencies is contained in this log. If you have tuning problems, sending this log to Customer Support can help with troubleshooting.

EyeTV Recordings have a .eyetv extension and look like this:

One recording file is special: **Live TV Buffer.eyetv**
This file belongs to EyeTV and is used to enable time shifting.

Schedules have the .eyetvsched extension and look like this:

Schedules will usually disappear when recording is complete. If a schedule repeats, then the .eyetvsched package will remain.

EyeTV Recordings and Schedules files are actually Mac OS X packages. A package is similar to a folder, but it cannot be opened by double-clicking in Finder. To look inside these packages, right-click (or Option-click) on them, and select Show Package Contents.

What's inside a package? The .mpg files contain the video and audio data, the other files contain metadata about the recording or schedule.

Backing up an EyeTV recording or schedule is very simple - move the .eyetv and .eyetvsched files with the corresponding names in and out of the Archive. Restart EyeTV for the changes to take effect.

You can also drag recordings from the Recordings section of the EyeTV Programs window, to the Finder. That will make a copy of that recording, in the .eyetv format. Move that copy to wherever you like, even to another EyeTV Archive.

If .eyetv files are moved elsewhere in the Finder, then double-clicking them will launch EyeTV.

**Playlists** are kept in an invisible folder called Playlists.
Auto Recording Features

Auto-Launch of EyeTV to Record

EyeTV can launch automatically two minutes before a scheduled recording is supposed to begin. For this to work, set the General section of the Preferences to Start EyeTV when a device is plugged in.

Waking From Sleep to Record

The EyeTV software can wake up your Mac to enable scheduled recordings to run. Automatic wake up occurs two minutes before the scheduled recording starts, in order to allow your Mac time to wake up. For this to work, set the General section of the Preferences to Start EyeTV when a device is plugged in. This feature should work if your display, hard drives or CPU are asleep - make sure the Energy Saver sleep interval in the System Preferences is set for two minutes or greater. Note that the system will not go to sleep while a Live TV window is open.

Automatically Switching on the Computer to Record

The EyeTV software can power on your Mac to enable scheduled recordings to run. Automatic power-on occurs two minutes before the scheduled recording starts, in order to allow your Mac time to start up. For this to work, set the General section of the Preferences to Start EyeTV when a device is plugged in. Furthermore, automatic login must be enabled in the System Preferences. This feature will power on your Mac, and potentially activate other peripherals that receive power over the FireWire or USB buses.

Please Note: In all of the above cases, if you have extended the scheduled recording time in the Recording section of the Preferences, EyeTV will launch two minutes before the padded time. For example, with the two minutes of default padding, EyeTV will launch four minutes before the scheduled time.
Electronic Programming Guide

tvtv

In Great Britain, Germany, Switzerland, Austria, Holland, Spain, Italy, France and Belgium the EPG is supplied by tvtv and the subscription period is one year. Customers in Finland and Sweden may use the tvtv UK service.

The EyeTV Setup Assistant guides you through configuring your tvtv account.

For existing tvtv users, please note that EyeTV cannot extend your account’s subscription period. We recommend keeping your present account until it expires, then re-running the EyeTV Setup Assistant again and creating a new account when asked to enter account information. We are working on improving this process.

tvtv Remote Scheduling

The tvtv service also offers a web site featuring remote scheduling. Remote scheduling allows you to send program information to EyeTV from any computer with Web access.

Here’s how it works: Your Mac at home (provided its Internet connection is present) periodically checks for new schedules that were added on the web site, then adds them to the local list of schedules. You’ll have to enable automatic checking of remote schedules in the Guide section of the EyeTV Preferences, it is not on by default.

Select Go to Online Guide from EyeTV’s File menu, then log onto the tvtv web site, using the tvtv user name and password that you configured in the EyeTV Setup Assistant.

Once you’ve found a program that you like, click the red REC OFF icon, which then changes to REC ON. This sends program information to the tvtv Job List. From there, it is stored until the next time EyeTV synchronizes with tvtv.

TitanTV

In the USA, the EPG is supplied by TitanTV and the subscription runs until the end of 2008.

The EyeTV Setup Assistant guides you through configuring your TitanTV account.

TitanTV Remote Scheduling

The TitanTV service also offers a web site featuring remote scheduling. Remote scheduling allows you to send program information to EyeTV from any computer with Web access.

Here’s how it works: Your Mac at home (provided its Internet connection is present) periodically checks for new schedules that were added on the web site, then adds them to the local list of schedules. You’ll have to enable automatic checking of remote schedules in the Guide section of the EyeTV Preferences, it is not on by default.

Select Go to Online Guide from EyeTV’s File menu, then log onto the TitanTV web site, using the user name and password that you configured in the EyeTV Setup Assistant. You will need to configure your TitanTV.com account, specifying your zip code, and the type of television programming you receive at your home location.

Once you’ve found a program that you like, click the Remote Schedule button. This sends
program information to the TitanTV server. From there, it is stored until the next time EyeTV synchronizes with TitanTV.

**TitanTV Guide Diagnostics**

For assistance in troubleshooting problems with the TitanTV electronic program guide, open the **TitanTV Guide Diagnostics** dialog from the Help menu.

**IceTV**

In Australia, the EPG is supplied by IceTV and the free trial subscription period is 3 months.

The **EyeTV Setup Assistant** guides you through configuring your IceTV account.

For existing IceTV users, please note that EyeTV cannot extend your account’s subscription period. We recommend keeping your present account until it expires, then re-running the **EyeTV Setup Assistant** again and creating a new account when asked to enter account information. We are working on improving this process.

**IceTV Remote Scheduling**

The IceTV service also offers a web site featuring remote scheduling. Remote scheduling allows you to send program information to EyeTV from any computer with Web access.

Here’s how it works: Your Mac at home (provided its Internet connection is present) periodically checks for new schedules that were added on the web site, then adds them to the local list of schedules. You’ll have to enable automatic checking of remote schedules in the **Guide** section of the **EyeTV Preferences**, it is not on by default.

Select **Go to Online Guide** from EyeTV's File menu, then log onto the IceTV web site, using the user name and password that you configured in the **EyeTV Setup Assistant**. You will need to configure your IceTV account, specifying your postal code, and the type of television programming you receive at your home location. You can also specify a “Device Label” for up to 3 different recording locations.

Once you’ve found a program that you like, click the red REC button. This sends program information to the IceTV server. From there, it is stored until the next time EyeTV synchronizes with IceTV.

**Other Countries / In-Stream EPG**

Elgato plans to offer a similar built-in guide for other countries in the future.

EyeTV can also build an EPG from information contained in a digital broadcast (DVB, ATSC, or ISDB-T). The “built-in” EPG offers significantly less information and covers fewer days than the EPG downloaded from an electronic programming guide web service, but it is an alternative for users without an active subscription, or those in a country currently not served by an online EPG service.

To manually set a channel to use the in-stream EPG, select the channel in **EyeTV’s Programs** window, then click into the **EPG** column. In the example above, channel 14-1 is being switched from the TitanTV EPG to the ATSC in-stream EPG.
Troubleshooting

Getting Help

Select EyeTV Help from the Help menu for links to detailed troubleshooting information for EyeTV, including the Frequently Asked Questions (FAQ), which contains an online Troubleshooting database:

http://faq.elgato.com

If you are still experiencing problems after troubleshooting, you can get expert help directly from Elgato by using our web-based Support Contact form:

http://support.elgato.com

Our Support Specialists will get back to you as soon as possible, usually between 48 and 72 hours.

EyeTV Lounge Forum

Connect with the large community of EyeTV users at the Elgato Lounge:

http://forums.elgato.com

If you have a question, problem, concern or feature request regarding EyeTV, this is a great place to check first.
